

To whom it may concern,

I wish to raise my concerns and objection to the Materials Recovery Facility, Fyshwick (application number 201700053). There has been no assessment of the emissions from the extra 460 truck movements a day that will be entering and exiting this facility. Diesel truck emissions are known to be carcinogenic, there has been no health impact assessment from extra diesel emissions from putting these extra trucks into a retail and commercial area.

Regards,
