Subject: Fyshwick Waste Transfer Station

Categories: Green Category

I was appalled & horrified to hear of this proposal.

I personally have MCS (Multiple Chemical Sensitivities) and when I bought in this area I chose it because it was residential and did not have a potentially toxic, smelly waste dump on my doorstep.

A Waste Transfer Station should never be located so close to such a high density suburban location.

It is dangerous and hard to monitor what goes into such a site and the effects on people either immediately or years down the track is hard to monitor but nonetheless is a great potential.

This should never be allowed to happen and I will do everything in my power to join others in fighting against this appalling proposal.

Regards
