Subject: IZ2 Zone

Good afternoon

In light of recent issues of waste management in the Canberra region I wish to make a strong claim that hazardous waste is being sorted in the Fyshwick IZ2 zone.

2 business off Lithgow Street clearly do not qualify for the IZ2 zoning they are in.

Tiger Waste and the CRS metal recycling facility are dangerous to the businesses and residents nearby – we have residents within 100 metres of the area in Wiluna St where purpose clauses allow for a residence.

It is blatantly obvious that the CRS facility is very similar to the business in Beard where a dangerous fire burnt uncontrollably last night. Very similar waste from motor cars with petrol tanks and gas cylinders are being, crushed and sorted right in the middle of Fyshwick.

The majority of the Zone objectives of Fyshwick and any IZ2 and not being adhered to:

<http://www.legislation.act.gov.au/ni/2008-27/copy/119213/pdf/2008-27.pdf>

BUT mainly

d) Ensure that industrial development achieves high environmental standards of cleaner production, waste disposal, noise and air quality

The two facilities here are extremely detrimental to our safety. The building waste dust that is constantly spewing over nearby businesses and residences via the sorting techniques of Tiger Waste – in open air excavators or regularly picking up building waste at a height where the dust freely flows over neighbouring properties.

We wish to have the air quality tested regularly as well as the dust on the premises and on surrounding premises - as the amount of dust spewing over our premises every day is increasing. Many of the local businesses and residents are extremely worried considering Tiger waste is dealing in smaller construction waste with a high risk of dealing in asbestos products.

We hope that you can assess these 2 businesses urgently and prevent such hazardous waste being sorted in an IZ2 zone.

Regards
