Objection to Fyshwick Material Waste EIS

Dear Sir/Madam

I object to the Fyshwick Material Waste proposal.

It is entirely inappropriate to place such an activity close to another suburb such as Narrabundah; let alone in a busy business area such as Fyshwick.

How would any person in any other suburb react if a such an activity were proposed in close proximity to their suburb ?

It is completely inappropriate and indicates a failed process in the making of such an Application.

Health issues, noise, and proximity to National buildings; let alone residential areas, has not been considered.

Environmentally, this proposal is ludicrous. Where are the people who usually undertake careful consideration of environmental proposals/issues ?

I thought that ACT wanted to be a leader in Waste Management, but this latest proposal will make ACT a laughing stock, both in Australia and internationally.

It would be a terrible legacy of the current ACT administration (as well as ACT residents), if this activity is permitted. Why is ACT suddenly dropping its environmental standards ??

If this is the best that the current administration can do; then I do not hold out much hope for ACT in the future (from a planning, administration and environmental perspective). The proposal would drive people away from ACT rather than attract people.

Fyshwick is an area where many people work, and visit - so why is such a Waste Facility proposed for a business area ?????

Please undertake more thorough consideration of the various issues. Put yourself in the shoes of others who would be affected by the proposal.

Thank you

(very very concerned resident of A.C.T.)
