**Subject:** EIS application 201700053 - Materials Recovery Facility

**Categories:** Green Category

I am writing to express my objection to the proposed materials recovery facility in Fyshwick and challenge the claims made in the EIS that the associated risks and impacts are minimal or able to be mitigated.

This facility will operate 24/7 bringing an additional 460 heavy truck movements to the area. This will generate unacceptable levels of air pollution, noise, smell, and traffic congestion.

The site is located in the middle of a large business precinct that is predominately retail and hospitality, not industrial, and is adjacent to residential suburbs and schools. The facility will significantly impact on the local business and residential community.

I would question the need for the facility, particularly with the Mugga Lane landfill, recycling and cogeneration facility located so close.
