

Dear Chief Planning Minister - Submission to reject the CRS MRF, Fyshwick.

Why has the submitted draft EIS not assessed air quality as required in the scoping document? Diesel emissions from the extra 460 truck movements per day on Ipswich St have not been addressed or assessed. Diesel fumes are known to be carcinogenic and have been demonstrated to have negative impacts on people with respiratory issues and young children. The EIS is fundamentally flawed for this reason and should never have been released by the Department as it did not address the requirements of the scoping document.

I request that you reject this EIS as being inadequate.

Yours sincerely,
